

Redesigned AEROFLEX EPDM™ Tube Cartons

Aeroflex USA recently announced redesigned graphics for our Standard Unslit and Self-Seal tube cartons.

An important aspect of this redesign was to better communicate to our customers how to successfully “knock out” the perforations on both ends of the box. The intent of our easy-open box ends is to facilitate quick access to insulation tubes while avoiding unsightly flaps and unnecessary labor to completely cut off box-end flaps.

Below is a recent announcement to our customers that includes a brief video about how to successfully knock out the perforations at the easy openings. Just scan the QR Code in the bottom right.

New Carton Graphics

Same High-Quality EPDM
You've Come to Know and Trust

- Updated Branding – **AEROFLEX Self-Seal™** (formerly Aerocel-SSPT) and **AEROFLEX EPDM™** (formerly Aerocel-AC)
- Differentiated graphics to easily identify **Self-Seal** (orange band) and **Standard** (all black) tube cartons in warehouse
- Knock-out perforations on both ends for quick access to tubes – no flaps
- Same cutout locations for easy handling
- AEROFLEX® template on top for fitting fabrication
- QR codes to AEROFLEX website and Installation Guide

Scan the QR for a short video about how to knock-out perfs for easy-open access.
